SIP Trunking

OPTIMIZE YOUR PHONE SYSTEM

TELNET WORLDWIDE

Flexible, Scalable and Intelligent Trunking

Maximize your business communications and value with SIP Trunking — a modern cloud-calling solution where you only pay for the paths you need. Unleash your voice system's full-feature functionality without investing in a new PBX.

Unify Your Network

Consolidate resources across multiple locations to simplify your network and improve your return on investment. Converging local and long-distance voice over your internet service optimizes the efficiency of your network.

Be Prepared

Our built-in business continuity feature automatically redirects calls to another phone or location in the event of an emergency, whether it's severe weather, a fire or a cut line. Business will continue no matter what.

Stop Overpaying

With SIP Trunking, there's no need to purchase service in 23-channel increments. Simply configure additional SIP call paths on your existing internet connection as your company expands. Customize the number of paths and only pay for what you need.

Maximize Functionality

Because SIP Trunking is a cloud-based solution, it's easy to implement upgrades and new IP-based features across all your business locations as they become available. Skip the hassle of physical installation and extra gear.
