

MIGRATE TO CLOUD CALLING

HD Voice Delivered Over the Bandwidth Provider of Your Choice

It's time to make the most of your digital phone system. IP-PRI delivers quality voice over your high-speed internet access in a single, smart package that adapts to your usage to maximize efficiency. Choose between Static or Dynamic device configuration options to tailor the solution to your business' needs.

Boost Efficiency

Build on your existing PBX investment and leverage your current PRI-capable equipment for a cost-effective VoIP solution.

Save Money

Affordable and flexible, this voice solution offers significant cost savings and easy scalability with a pay-per-path model.

Experience Quality

Get high-quality, reliable voice connections every time. Modernize your legacy system and thrive in the digital era.

Optimize Bandwidth

Power PRI connections through your current internet connection to optimize the bandwidth you already use.

How It Works

- 1** When a call is made to your number, it travels into our network via the PSTN.
- 2** We then pass that call from our network over a virtual call path called a SIP Trunk, leveraging your existing internet connection.
- 3** The SIP Trunk is delivered to your internet router and passed to your Local Area Network, or LAN.
- 4** Your TelNet-provided device takes the SIP signaling and converts it into PRI, passing it off to your PBX.
- 5** You receive the call.

Get to Know TelNet Worldwide

Too many businesses struggle with communication technology that's ineffective and frustrating. **We're changing that.** Our empowering, cloud-based solutions simplify the way you communicate and collaborate.
